Experienced software engineer with 7+ years of hands-on experience in crafting scalable, high-performance web applications. Skilled in JavaScript, ReactJS, NodeJS, TypeScript, SQL, and NoSQL databases. Expertise in architecting reusable modules, automating builds, and optimizing front-end performance. Proficient in RESTful APIs, CI/CD, Docker, Kubernetes, Microservices, Task/messaging queues, and API integrations. Strong background in authentication, tested JavaScript, HTML5, CSS, and state management tools. Thrives on creating distributed systems, pioneering new tech, and streamlining tasks. Recognized for project management, technical leadership, and mentorship.

Technical Skills

Relevant Experience

Senior Fullstack Engineer

Sept 2020 - Present

Tradeling

- Tradeling is the leading B2B E-commerce Marketplace in the MENA region.
- Designed and implemented a scalable back-office application, increasing operational efficiency and supporting 10K daily users.
- Optimized frontend components (banners, carousels, cards), improving page load speed by 35% and user experience.
- Reduced API response time by 40% through database optimization, minimizing server load.
- Led migration from MongoDB to PostgreSQL, ensuring data integrity and seamless transition.
- Implemented Headless CMS (Strapi), reducing webpage creation time by 50% for business and marketing teams.
- Managed AWS services (EC2, S3, CloudFront), ensuring 99.9% uptime and platform reliability.
- Automated testing and CI/CD pipelines, reducing deployment time by 40% and improving software quality.
- Mentored 5+ junior developers, accelerating onboarding and fostering a collaborative environment.
- Conducted code reviews, ensuring adherence to best practices and maintaining high-quality standards.

Software Developer

Dec 2018 - Jun 2019

IBM (Contractor)

- I was on the TAMM Project In Abu Dhabi. It is a digital transformation project aiming to revolutionise how citizens of Abu Dhabi interact with government services.
- Led development of TAMM, a government services platform, improving citizen interactions with Abu Dhabi government services.
- Collaborated with cross-functional teams to ensure timely delivery of high-quality software products.
- Developed business calculators for prospective investors, integrating multiple APIs for accurate estimates.
- Built responsive web UIs for web and mobile devices, improving user experience and accessibility.
- Optimized frontend data visualization with charts and interactive maps, enhancing decision-making for users.
- Improved frontend performance by 30% through database optimization and reduced API response times.
- Designed and implemented testing strategies, integrating automated tests into the CI/CD pipeline for 15% higher system reliability.
- Created technical documentation, including user manuals and API references, for both technical and non-technical stakeholders.
- Implemented security protocols to protect sensitive data and ensure user privacy.
- Resolved bugs and enhanced application performance, resulting in increased user satisfaction and reduced vulnerabilities.

Education

Hult International Business School

2024 - 2025

Masters of Business Administration(MBA)

- Business Data Analysis
- Accounting for Managers
- Financial Management and Decision making
- Marketing Strategy

Covenant University

2010 - 2014

Bachelor's Degree, Computer Science

CGPA: 4.43/5

Selected Personal Projects

Location Intelligence System

2023

This project is a Location Intelligence System that allows users to track and manage vehicle locations. It includes a web-based user interface for interaction and a back-end API for data storage and retrieval. The system utilizes Typescript, React for the front-end development, Node.js and Express for the back-end API, and MongoDB as the database management system. It also integrates with Google Maps Developer APIs for displaying vehicle locations on a map.

Github Searcher

2020

This project allows users to search through Github users and repositories. It includes a web-based user interface for interaction and a back-end API for data storage and retrieval. The system utilizes Typescript, React for the front-end development, Node.js and Express for the back-end API, and Redis for caching API requests to Github.
