Senior Frontend & Full-Stack Engineer with 8+ years of experience designing and shipping data-intensive SaaS platforms across cybersecurity, e-commerce, and government. Specialized in React, Next.js, and TypeScript, with hands-on depth in Node.js and NestJS for building scalable APIs that power rich user interfaces. Comfortable owning frontend architecture, performance, and developer experience end-to-end, from component design through CI/CD and cloud deployment (AWS, GCP, Docker, Kubernetes). Known for turning ambiguous product requirements into pragmatic, maintainable solutions and for using modern AI-assisted development workflows to iterate faster without sacrificing code quality.

Core Skills

Frontend Engineering

React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, TailwindCSS, Responsive Design, Accessibility

UI Architecture & Systems

Component Architecture, Component Libraries, State Management, Performance Optimization, Design System Collaboration

Testing & Quality

Jest, Cypress, TDD, Integration Testing, End-to-end Testing, CI/CD Automation

Product & Collaboration

Product Engineering, System Design, API Documentation, Agile/Scrum, Cross-functional Collaboration, Mentorship

AI-assisted Workflows

AI-assisted Development, Intelligent Automation, AI-powered Product Experiences

Backend & APIs

Node.js, NestJS, REST APIs, GraphQL, Real-time Data, Microservices, PostgreSQL, MongoDB, Redis

Cloud & DevOps

AWS (Lambda, ECS, CloudFront, S3), GCP, Docker, Kubernetes, GitHub Actions, Serverless

Professional Experience

Senior Full-Stack Engineer

Apr 2025 – Present

TryHackMe | Remote

- Led frontend development for React-based dashboards and product surfaces in a high-traffic cybersecurity platform, focusing on responsiveness, safe rollout, and maintainable UI architecture.
- Built and refined reusable component patterns used across multiple product areas, improving consistency and reducing duplicated frontend work.
- Develop frontend features backed by Node.js services, translating product requirements into clear UI and API changes.
- Improved dashboard responsiveness through performance profiling, targeted render optimization, and cleanup of inefficient data-fetching paths.
- Implemented real-time product features with WebSockets for live progress updates and notifications.
- Strengthened delivery workflows by standardizing linting, testing, and build checks in GitHub Actions and Docker-based environments.
- Added structured logging and request-level observability to make production issues easier to trace and debug.
- Wrote API usage notes, component documentation, and setup guides that reduced onboarding friction for engineers and contributors.
- Reviewed code with a focus on readability, test coverage, and long-term maintainability, while making incremental refactors to keep frontend code healthy.
- Worked closely with product and data stakeholders to turn ambiguous requirements into clear deliverables, acceptance criteria, and release plans.

Senior Full-Stack Engineer

Sept 2020 – Mar 2024

Tradeling | Dubai, UAE

- Designed and shipped a React and Next.js back-office application used by internal teams to support daily operational workflows.
- Built and optimized shared frontend modules, including banners, carousels, and content components, with a focus on rendering efficiency and maintainability.
- Improved application performance through code-splitting, memoization, and tighter control over data-fetching patterns.
- Worked on backend performance issues by tuning queries, adding indexes, and introducing caching where appropriate.
- Led the migration from MongoDB to PostgreSQL, covering schema design, data validation, rollout planning, and production cutover.
- Introduced Strapi as a headless CMS, enabling non-technical teams to manage and publish content without engineering support for routine updates.
- Managed AWS infrastructure across EC2, S3, and CloudFront to support reliable delivery across environments.
- Built CI/CD pipelines with automated checks for testing, linting, and deployment gating.
- Mentored junior engineers on React fundamentals, debugging, pull request quality, and test writing.
- Partnered with product, design, and operations teams to deliver launches while balancing UX, data integrity, and engineering constraints.
- Drove incremental refactors to simplify code structure, reduce regressions, and improve development speed over time.

Software Developer, TAMM Project

Dec 2018 – Jun 2019

IBM (Contractor) | Abu Dhabi, UAE

- Contributed to Abu Dhabi's TAMM e-government platform by building modular services and responsive web interfaces for citizen-facing workflows.
- Integrated external business and investment APIs into calculators and dashboards used to support decision-making.
- Built responsive interfaces for desktop and mobile, improving usability and consistency across screen sizes.
- Improved data-heavy screens by reducing redundant requests, introducing caching, and simplifying response handling on the frontend.
- Worked on charts and map-based interfaces to present information more clearly to end users.
- Added unit and integration tests and integrated them into CI workflows to support more stable releases.
- Produced technical documentation for APIs and user-facing functionality to support delivery across engineering and stakeholder groups.
- Collaborated with design, analytics, and infrastructure teams to refine requirements and reduce late-stage delivery surprises.
- Applied secure data-handling practices in line with platform and organizational standards.
- Investigated defects, documented reproducible cases, and supported fixes through release.

Software Engineer

Aug 2017 – Feb 2018

Andela | Remote

- Built web applications for publishing and messaging products, with a focus on clean UI, responsiveness, and maintainable frontend code.
- Developed features that supported content creation, editing, and management in editorial workflows.
- Worked on performance-sensitive product areas to improve responsiveness under load.
- Contributed bug fixes and documentation improvements to open-source commerce tooling.
- Collaborated with distributed teams across time zones using clear specs, async communication, and shared engineering standards.
- Added unit and integration tests to protect core product flows from regression.
- Set up linting, formatting, and lightweight CI checks to improve code quality and review consistency.
- Documented APIs and onboarding steps to help new contributors ramp up faster.

Systems Engineer (Electronic Payment Solutions)

Jan 2016 – Aug 2017

Interswitch | Lagos, Nigeria

- Supported production payment systems across deployment, maintenance, and incident response workflows.
- Managed upgrades and operational changes across payment infrastructure in coordination with bank and partner teams.
- Worked with HSM deployments and secure transaction environments.
- Supported integrations across card networks and payment channels including ATM, POS, web, and mobile.
- Maintained SQL environments, deployment procedures, and operational checklists to improve release reliability.
- Assisted with troubleshooting, escalation, and post-fix validation in business-critical systems.

Education

Hult International Business School

2024 - 2025

Masters of Business Administration(MBA)

- Business Data Analysis
- Accounting for Managers
- Financial Management and Decision making
- Marketing Strategy

Covenant University

2010 - 2014

Bachelor's Degree, Computer Science

CGPA: 4.43/5

Projects

Location Intelligence System

2023

Built an asset tracking platform using React, Node.js, MongoDB, and Google Maps API.

Github Searcher

2020

Developed a Redis-cached API integration app to explore GitHub users and repositories.

Certifications

Grokking Modern System Design Interview for Engineers&Managers

2023

Educative, Inc.
