

Bunmi Alao

https://bumsyalao.dev/	bumsyalao@gmail.com	https://github.com/bumsyalao	https://linkedin.com/in/bumsyalao	+971501507152
Product-driven Full Stack Engineer with 8+ years of experience designing, building, and scaling data-intensive SaaS and AI-powered platforms across e-commerce, cybersecurity, and government sectors. Skilled in Node.js, NestJS, React, Next.js, and MongoDB, with strong proficiency in cloud infrastructure (AWS, GCP, Docker, Kubernetes). Known for turning product requirements into seamless technical solutions, optimizing performance, and driving full lifecycle delivery from concept to deployment. Passionate about building sustainable, scalable, and high-performance systems in fast-paced environments.				
Core Skills				
Languages & Frameworks: Node.js NestJS React Next.js TypeScript JavaScript (ES6+) HTML5 CSS3 TailwindCSS Backend & Databases: PostgreSQL MongoDB Redis REST APIs GraphQL Microservices Architecture Cloud & DevOps: AWS (Lambda, ECS, S3) GCP Docker Kubernetes GitHub Actions Serverless Functions Testing & Quality: Jest Cypress TDD Integration Testing CI/CD Automation Leadership & Collaboration: System Design API Documentation Agile/Scrum Product Ownership Cross-functional Collaboration				

Professional Experience

Senior Full-Stack Engineer	Apr 2025 – Present
-----------------------------------	---------------------------

TryHackMe | Remote

- Developed and maintained data-intensive APIs and dashboards for a cybersecurity SaaS serving 4M+ users, focusing on reliability, responsiveness, and simple rollout paths.
- Built reusable React components and Node.js services, improving stability and enabling faster iterations across multiple product areas.
- Increased user engagement by ~25% through modular UI updates, targeted performance profiling, and backend API optimization on high-traffic endpoints.
- Integrated real-time features (WebSockets) for live progress and notifications, and optimized MongoDB queries for lower latency during peak usage.
- Strengthened delivery with Docker + GitHub Actions CI/CD, standardizing build/test/lint stages and cutting deployment time by ~40%.
- Introduced light observability hygiene (structured logs, key request metrics) to simplify debugging and reduce time-to-identify on recurring issues.
- Collaborated closely with product and data to translate ambiguous requirements into scoped technical tasks with clear success metrics and acceptance criteria.
- Authored concise API usage notes, component readme's, and setup docs to speed onboarding and reduce back-and-forth on integration questions.
- Participated in code reviews with attention to clarity, test coverage, and maintainability; used small refactors to reduce tech debt without slowing delivery.
- Coordinated cross-team work (engineering, product, contributors) to align releases, reduce integration risk, and keep stakeholder communication tight.

Senior Full-Stack Engineer	Sept 2020 – Mar 2024
-----------------------------------	-----------------------------

Tradeling | Dubai, UAE

- Designed and shipped a scalable back-office application that streamlined internal workflows and reliably supported 10K+ daily users.
- Optimized core React/Next.js modules (banners, carousels, content cards) through code-splitting and memoization, improving page load by ~35%.
- Reduced backend API latency by ~40% with targeted query tuning, indexes, and caching, easing load on shared services.
- Led the MongoDB to PostgreSQL migration, planning schema changes, data validation, rollbacks, and cut-over with minimal disruption.
- Introduced and operationalized Strapi (Headless CMS) so non-technical teams could publish changes ~90% faster.
- Managed AWS (EC2, S3, CloudFront) for predictable performance and availability, maintaining high uptime across environments.
- Built CI/CD pipelines with automated tests, linting, and gated deploys, reducing delivery time by ~40% and raising release confidence.
- Mentored 5+ junior engineers on code quality, debugging, PR etiquette, and test writing; improved onboarding speed and consistency.
- Conducted systematic code reviews with clear checklists (security, performance, accessibility), raising baseline quality across squads.
- Collaborated with product/design/ops to prioritize data integrity and UX, balancing scope with timelines during high-pressure launches.
- Drove small, continuous refactors to reduce tech debt, standardize folder structures, and prevent regressions.

Software Developer, TAMM Project	Dec 2018 – Jun 2019
---	----------------------------

IBM (Contractor) | Abu Dhabi, UAE

- Contributed to TAMM, Abu Dhabi's e-Government platform, building modular Node.js/Python services and responsive UI components.
- Integrated external business and investment APIs into calculators and dashboards; improved decision workflows for end-users.
- Built responsive web UIs for desktop and mobile, improving accessibility and consistency across devices.
- Improved front-end data visualization (charts, map views) and added interaction patterns that supported faster insights.
- Raised performance ~30% on data-heavy screens by eliminating redundant calls, adding caching, and optimizing API response payloads.
- Designed and implemented testing strategies (unit/integration) and wired them into the CI pipeline to stabilize releases.
- Wrote and maintained technical documentation (API references, user guides) to support multiple stakeholder groups.
- Collaborated cross-functionally (design, analytics, infra) to refine requirements, validate scope, and reduce surprises late in sprints.
- Implemented secure data handling patterns, aligning with organizational standards for privacy and confidentiality.
- Triaged bugs with clear reproduction steps and metrics, reducing time-to-fix on recurring issues.
- Participated in sprint planning, demos, and retros to continuously improve delivery practices and communication.
- Helped streamline deployment steps with containerization and consistent environment configuration.

Software Engineer	Aug 2017 – Feb 2018
--------------------------	----------------------------

Andela | Remote

- Built an online publishing platform that made it easy for users to create, edit, and manage articles with a clean editorial UI.
- Developed a messaging web app focused on performance and scalability, improving responsiveness under load.
- Contributed to Reaction Commerce (open-source) with bug fixes and documentation improvements recognized by maintainers.
- Collaborated with distributed teams across time zones, using clear specs, async updates, and shared standards to stay unblocked.
- Implemented unit and integration tests (e.g., Jest/Mocha where applicable) to protect core modules from regressions.
- Established linting/formatting rules and small CI checks to keep code style consistent and PRs easier to review.
- Documented APIs and onboarding steps for new contributors, lowering ramp-up time and improving project continuity.

Systems Engineer (Electronic Payment Solutions)	Jan 2016 – Aug 2017
--	----------------------------

Interswitch | Lagos, Nigeria

- Supported continuous delivery/deployment of payment solutions serving ~13M customers across multiple channels.
- Led FEP deployments, upgrades, and maintenance across Postilion/PostCard/Postilion Office, coordinating with bank teams.
- Deployed and maintained Hardware Security Modules (HSMs) to safeguard keys and ensure robust transaction security.
- Drove channel certifications and enhancements (ATM, POS, WEB, Mobile) in line with EMV and network standards.
- Integrated external networks and processors (MasterCard, VISA, Verve), ensuring end-to-end compatibility.
- Administered MS SQL environments for reliability and performance, enforcing backups and maintenance routines.
- Contributed to incident response with structured triage, clear escalation paths, and post-fix validation.
- Wrote operational SOPs and deployment checklists that reduced misconfigurations and handover friction.
- Performed capacity checks and performance tests ahead of peak periods to reduce risk of slowdowns and outages.
- Coordinated with compliance/security on audit items, evidence gathering, and remediation tracking.
- Partnered with business stakeholders to prioritize fixes that protected customer trust and minimized transaction failures.
- Assisted with vendor coordination and environment parity across test/stage/prod to stabilize releases.

Education

Hult International Business School	2024 - 2025
---	--------------------

Masters of Business Administration(MBA)

- Business Data Analysis
- Accounting for Managers
- Financial Management and Decision making
- Marketing Strategy

Covenant University	2010 - 2014
----------------------------	--------------------

Bachelor's Degree, Computer Science

CGPA: 4.43/5

Projects

Location Intelligence System	2023
-------------------------------------	-------------

Built an asset tracking platform using React, Node.js, MongoDB, and Google Maps API.

Github Searcher	2020
------------------------	-------------

Developed a Redis-cached API integration app to explore GitHub users and repositories.

Certifications

Grokking Modern System Design Interview for Engineers&Managers	2023
---	-------------

Educative, Inc.
