

Ruth Alao

<http://bumsyalao.dev/> bumsyalao@gmail.com </bumsyalao> </bumsyalao> </medium> [+971501507152](tel:+971501507152)

Experienced software engineer with 6+ years of hands-on experience in crafting scalable, high-performance web applications. Skilled in JavaScript, ReactJS, NodeJS, TypeScript, SQL, and NoSQL databases. Expertise in architecting reusable modules, automating builds, and optimizing front-end performance. Proficient in RESTful APIs, CI/CD, Docker, Kubernetes, Microservices, Task/messaging queues, and API integrations. Strong background in authentication, tested JavaScript, HTML5, CSS, and state management tools. Thrives on creating distributed systems, pioneering new tech, and streamlining tasks. Recognized for project management, technical leadership, and mentorship.

Relevant Experience

Senior Fullstack Engineer

Oct 2023 - Present

MAGNiTT

Working Language: English

- Spearheaded the redesign of the investors' profiles at MAGNiTT, employing a strategic approach to enhance user experience and drive stakeholder engagement. The revamped interface led to a 30% increase in user retention and a 25% rise in investment inquiries, underscoring its significant impact on attracting and retaining key stakeholders.
- Implemented Sentry monitoring tool into the project infrastructure, enhancing system reliability and enabling proactive issue detection and resolution. This integration resulted in a 20% reduction in system downtime and improved overall platform stability.
- Developed and implemented various features aimed at improving the application's functionality and user experience. These enhancements contributed to a 15% increase in user satisfaction ratings and a 10% boost in user engagement metrics.
- Led end-to-end feature development cycles, from project management to QA testing, ensuring seamless integration of new features into the application. This comprehensive approach resulted in a reduction deployment time and improved overall project efficiency.
- Managed AWS services, including EC2, S3, and CloudFront, to host, scale, and maintain the application effectively. This proactive management approach ensured a highly available and reliable platform, resulting in an increase in system uptime and improved overall platform performance.
- Introduced automated testing and deployment processes, streamlining development workflows and accelerating feature delivery. These automation initiatives led to a 30% reduction in deployment errors and an increase in development velocity, ultimately improving overall software quality and time-to-market.
- Provided guidance and mentorship to junior developers, fostering a collaborative and supportive team environment. This mentorship resulted in accelerated onboarding processes and enhanced professional growth opportunities for new team members, contributing to overall team cohesion and productivity.
- Conducted thorough code reviews for fellow developers, offering constructive feedback and guidance to promote adherence to best practices and maintain high code quality standards. These reviews led to a reduction in code defects and improved overall code maintainability, ensuring the long-term stability and scalability of the application.

MAGNiTT

Full-stack Engineer

June 2019 - July 2020

Freelance

Working Language: English

- Successfully managed multiple freelance projects simultaneously, demonstrating strong organizational and time management skills while delivering high-quality solutions within tight deadlines.
- Collaborated closely with clients to understand their unique business requirements and translate them into actionable technical specifications, resulting in customized web solutions that exceeded client expectations.
- Developed responsive and user-friendly web applications using modern front-end technologies such as HTML5, CSS3, and JavaScript framework React.js, resulting in enhanced user engagement and satisfaction.
- Designed and implemented robust back-end architectures using server-side technologies such as Node.js ensuring scalability, security, and performance optimization.
- Integrated third-party APIs and services to extend the functionality of web applications, leveraging technologies such as RESTful APIs, OAuth, and GraphQL, resulting in seamless integration with external platforms and services.
- Implemented e-commerce solutions, including payment gateways and shopping cart functionality, to enable online transactions and enhance the revenue generation capabilities of client websites.
- Conducted thorough testing and debugging of web applications to identify and resolve issues promptly, ensuring a smooth and error-free user experience across different devices and browsers.
- Provided ongoing maintenance and support services to clients, including software updates, performance monitoring, and troubleshooting, fostering long-term client relationships and ensuring the continued success of their web applications.
- Proactively researched and recommended new technologies and best practices to clients, helping them stay ahead of the competition and adopt innovative solutions that drive business growth and success.
- Received consistently positive feedback and referrals from satisfied clients, highlighting the quality of work, professionalism, and reliability as a freelance full-stack web developer.

Andela Nigeria

Working Language: English

- Andela is an organisation that cultivates IT talent in Africa and provides leading global technology companies with access to a high-skilled resource pool.
- Created an online publishing platform that enables users to publish, share, and manage their articles with ease.
- Collaborated effectively with remote teams located across various time zones to ensure seamless communication, efficient workflow, and timely project completion.
- Developed a messaging web application to facilitate communication and collaboration among teams. The application features complex functionalities and is optimized for performance and scalability.
- Made significant contributions to the open-source project Reaction Commerce, including fixing bugs, and improving documentation.
- Took part in Andela coding boot camp and multiple hackathons to sharpen coding skills and gain hands-on experience in developing innovative solutions.
- Contributed to the development of Cards For Humanity, an online version of the popular card game, Cards Against Humanity.

Education

Covenant University

2010 - 2014

Bachelor's Degree, Computer Science

CGPA: 4.43/5

Final year project: A Computing Platform for Metabolic Network Visualization and Topological Analysis.

Selected Personal Projects

Location Intelligence System

2023

This project is a Location Intelligence System that allows users to track and manage vehicle locations. It includes a web-based user interface for interaction and a back-end API for data storage and retrieval. The system utilizes Typescript, React for the front-end development, Node.js and Express for the back-end API, and MongoDB as the database management system. It also integrates with Google Maps Developer APIs for displaying vehicle locations on a map.

Tradeling

Working Language: English

- Tradeling is the leading B2B E-commerce Marketplace in the MENA region with approximately 10k daily users.
- Accomplished the design and implementation of a highly scalable, maintainable, and performant back-office application architecture and code that provided data and functionality to support Tradeling customers, manage orders, review and approve products, set up campaigns, create promotions, configure tags, manage commissions per user, generate invoices, and perform back-office user management, as measured by it's successful use in enhancing operational efficiency and customer satisfaction.
- Developed frontend web components such as banners, carousels, and cards. Improved the performance of the frontend application by optimizing the database design, reducing API response time, and minimizing server load. This led to a substantial enhancement in page load speed and user experience. Implemented analytics and impressions tracking for all banners to collect accurate user interaction data and help guide optimization strategies.
- Successfully executed migrations from non-relational MongoDB to relational PostgreSQL database, ensured the seamless transfer of data and maintenance of data integrity.
- Led the implementation of Headless CMS, Strapi, as a key tool for the business and marketing team, providing a more user-friendly interface that facilitates the creation and deployment of web pages in a faster and more efficient manner.
- Managed AWS services including EC2, S3, CloudFront, and other cloud services to effectively host, scale and maintain the application, ensuring a highly available and reliable platform.
- Established automated testing and deployment processes, resulting in increased efficiency, faster turnaround times, and improved overall software quality.
- Provided guidance and mentorship to junior developers during onboarding, fostering a collaborative and supportive team environment while ensuring successful integration and professional growth for new team members.
- Conducted thorough code reviews for fellow developers, offering constructive feedback and guidance to promote adherence to best practices and maintain high code quality standards.

Software Developer

Dec 2018 - May 2019

IBM (contractor)

Working Language: English

- TAMM Project In Abu Dhabi is an impactful project aiming to revolutionise how citizens of Abu Dhabi interact with government services.
- Worked closely with teams from different departments to ensure timely delivery of software products that meet quality standards.
- Developed robust business calculators for prospective investors, integrating multiple APIs to provide accurate estimate calculations.
- Incorporated third-party tools and middleware, as well as internally developed applications for web browsers and mobile devices by building responsive web application UIs to enhance user experience and increase accessibility.
- Created an optimized frontend visualization of investment data by using charts, graphs, and interactive maps, giving users multiple options to view data based on their preferences and enabling them to make informed business decisions.
- Improved the frontend application's performance by optimizing database design, reducing API response time, and minimizing server load.
- Implemented testing processes, designed strategies, wrote test cases and incorporated automated tests into CI/CD pipeline to ensure the efficiency, fault tolerance, reliability, and high availability of the system, and to facilitate easy collaboration among team members.
- Created comprehensive documentation for project components, including technical specifications, user manuals, and API references, to ensure clear understanding and ease of use for both technical and non-technical audiences.
- Implemented robust security measures to safeguard sensitive data and ensure the privacy of users.
- Resolved major and minor bugs in the codebase to enhance user satisfaction, improve application performance, and mitigate potential vulnerabilities.
- Collaborate with team members in code reviews and pair programming, addressing concerns related to robustness, maintainability, development speed, performance, security, and architecture to improve the quality of the codebase.

Interswitch Nigeria

Working Language: English

- Interswitch is an Africa-focused integrated digital payments facilitating the electronic circulation of money between individuals and organizations on a timely and consistent basis.
- Spearheaded continuous delivery and deployment of payments across multiple sites, serving approximately 13 million customers.
- Led full FEP Deployment, Upgrades, Maintenance & Support of core banking systems like Postilion, Postcard, Postilion Office.
- Managed the successful deployment of Hardware Security Modules (HSM), ensuring robust security measures.
- Played a pivotal role in channel enhancement and certification, including ATM, POS, WEB, and Mobile, ensuring compliance with industry standards such as EMV certification.
- Orchestrated seamless integration with external systems, parties, and networks, including processors and switches like MasterCard, VISA, and VERVE.
- Exhibited expertise in installing, managing, upgrading, and administering Microsoft SQL databases.
