Senior Frontend & Full-Stack Engineer with 8+ years of experience designing and shipping data-intensive SaaS platforms across cybersecurity, e-commerce, and government. Specialized in React, Next.js, and TypeScript, with hands-on depth in Node.js and NestJS for building scalable APIs that power rich user interfaces. Comfortable owning frontend architecture, performance, and developer experience end-to-end, from component design through CI/CD and cloud deployment (AWS, GCP, Docker, Kubernetes). Known for turning ambiguous product requirements into pragmatic, maintainable solutions and for using modern AI-assisted development workflows to iterate faster without sacrificing code quality.

Core Skills

Frontend Engineering

React Next.js TypeScript JavaScript (ES6+) HTML5 CSS3 TailwindCSS Responsive Design Accessibility

UI Architecture & Systems

Component Architecture Component Libraries State Management Performance Optimization Design System Collaboration

Testing & Quality

Jest Cypress TDD Integration Testing End-to-end Testing CI/CD Automation

Product & Collaboration

Product Engineering System Design API Documentation Agile/Scrum Cross-functional Collaboration Mentorship

AI-assisted Workflows

AI-assisted Development Intelligent Automation AI-powered Product Experiences

Backend & APIs

Node.js NestJS REST APIs GraphQL Real-time Data Microservices PostgreSQL MongoDB Redis

Cloud & DevOps

AWS (Lambda, ECS, CloudFront, S3) GCP Docker Kubernetes GitHub Actions Serverless

Professional Experience

Senior Full-Stack Engineer

Apr 2025 – Present

TryHackMe | Remote

- Led frontend development for data-intensive React dashboards in a cybersecurity SaaS serving 6M+ users, prioritizing responsiveness, reliability, and safe rollout paths.
- Built and evolved reusable React component patterns backed by Node.js services, improving UI consistency and enabling faster iterations across multiple product areas.
- Increased user engagement by ~25% through modular UI updates, targeted performance profiling, and focused optimization of high-traffic API endpoints.
- Implemented real-time features with WebSockets for live progress and notifications, and tuned MongoDB queries to reduce latency during peak usage.
- Strengthened delivery with Docker and GitHub Actions CI/CD, standardizing build/test/lint stages and cutting deployment time by ~40%.
- Introduced practical observability hygiene (structured logs, key request metrics) to simplify debugging and reduce time-to-identify on recurring issues.
- Worked closely with product and data teams to turn ambiguous requirements into well-scoped frontend and API work with clear success metrics and acceptance criteria.
- Authored concise API usage notes, component READMEs, and setup docs to speed onboarding and reduce back-and-forth on integration questions.
- Participated in code reviews with a focus on readability, test coverage, and long-term maintainability; used small, continuous refactors to keep tech debt in check without slowing delivery.
- Used AI-assisted development workflows (code suggestions, refactor guidance) to accelerate iteration on React and Node.js modules while keeping review standards high.
- Coordinated cross-team work (engineering, product, contributors) to align releases, reduce integration risk, and keep stakeholder communication tight.

Senior Full-Stack Engineer

Sept 2020 – Mar 2024

Tradeling | Dubai, UAE

- Designed and shipped a React/Next.js back-office application that streamlined internal workflows and reliably supported 10K+ daily users.
- Optimized core React/Next.js modules (banners, carousels, content cards) via code-splitting and memoization, improving page load by ~35%.
- Reduced backend API latency by ~40% with targeted query tuning, indexes, and caching, easing load on shared services.
- Led the MongoDB to PostgreSQL migration end-to-end, including schema design, data validation, rollbacks, and cut-over with minimal disruption.
- Introduced and operationalized Strapi (headless CMS) so non-technical teams could publish and iterate on content ~90% faster.
- Managed AWS (EC2, S3, CloudFront) for predictable performance and availability, maintaining high uptime across environments.
- Built CI/CD pipelines with automated tests, linting, and gated deploys, reducing delivery time by ~40% and raising release confidence.
- Mentored 5+ junior engineers on frontend best practices, debugging, PR etiquette, and test writing; improved onboarding speed and consistency.
- Conducted systematic code reviews with clear checklists (security, performance, accessibility), raising baseline quality across squads.
- Collaborated with product, design, and ops to balance data integrity, UX, and delivery timelines during high-pressure launches.
- Drove small, continuous refactors to reduce tech debt, standardize folder structures, and prevent regressions.

Software Developer, TAMM Project

Dec 2018 – Jun 2019

IBM (Contractor) | Abu Dhabi, UAE

- Contributed to TAMM, Abu Dhabi's e-Government platform, building modular Node.js/Python services and responsive, component-based web UIs.
- Integrated external business and investment APIs into calculators and dashboards, improving decision workflows for end-users.
- Built responsive web interfaces for desktop and mobile, improving accessibility, layout consistency, and usability across devices.
- Enhanced front-end data visualizations (charts, map views) and interaction patterns to surface insights faster for users.
- Raised performance ~30% on data-heavy screens by eliminating redundant calls, adding caching, and optimizing API response payloads.
- Designed and implemented testing strategies (unit and integration) and wired them into the CI pipeline to stabilize releases.
- Wrote and maintained technical documentation (API references, user guides) to support multiple stakeholder groups.
- Collaborated with design, analytics, and infrastructure teams to refine requirements, validate scope, and reduce surprises late in sprints.
- Implemented secure data handling patterns in line with organizational standards for privacy and confidentiality.
- Triaged bugs with clear reproduction steps and metrics, reducing time-to-fix on recurring issues.
- Participated in sprint planning, demos, and retros to continuously improve delivery practices and communication.
- Helped streamline deployment steps with containerization and consistent environment configuration.

Software Engineer

Aug 2017 – Feb 2018

Andela | Remote

- Built an online publishing platform with a clean editorial web UI, making it easy for users to create, edit, and manage articles.
- Developed a messaging web app focused on performance and scalability, improving responsiveness under load.
- Contributed to Reaction Commerce (open-source) with bug fixes and documentation improvements recognized by maintainers.
- Collaborated with distributed teams across time zones, using clear specs, async updates, and shared standards to stay unblocked.
- Implemented unit and integration tests (Jest/Mocha where applicable) to protect core modules from regressions.
- Established linting and formatting rules plus small CI checks to keep code style consistent and pull requests easier to review.
- Documented APIs and onboarding steps for new contributors, lowering ramp-up time and improving project continuity.

Systems Engineer (Electronic Payment Solutions)

Jan 2016 – Aug 2017

Interswitch | Lagos, Nigeria

- Supported continuous delivery and deployment of payment solutions serving ~13M customers across multiple channels.
- Led FEP deployments, upgrades, and maintenance across Postilion/PostCard/Postilion Office, coordinating closely with bank teams.
- Deployed and maintained Hardware Security Modules (HSMs) to safeguard keys and ensure robust transaction security.
- Drove channel certifications and enhancements (ATM, POS, WEB, Mobile) in line with EMV and network standards.
- Integrated external networks and processors (MasterCard, VISA, Verve), ensuring end-to-end compatibility.
- Administered MS SQL environments for reliability and performance, enforcing backups and maintenance routines.
- Contributed to incident response with structured triage, clear escalation paths, and post-fix validation.
- Wrote operational SOPs and deployment checklists that reduced misconfigurations and handover friction.
- Performed capacity checks and performance tests ahead of peak periods to reduce risk of slowdowns and outages.
- Coordinated with compliance and security teams on audit items, evidence gathering, and remediation tracking.
- Partnered with business stakeholders to prioritize fixes that protected customer trust and minimized transaction failures.
- Assisted with vendor coordination and environment parity across test/stage/prod to stabilize releases.

Education

Hult International Business School

2024 - 2025

Masters of Business Administration(MBA)

- Business Data Analysis
- Accounting for Managers
- Financial Management and Decision making
- Marketing Strategy

Covenant University

2010 - 2014

Bachelor's Degree, Computer Science

CGPA: 4.43/5

Projects

Location Intelligence System

2023

Built an asset tracking platform using React, Node.js, MongoDB, and Google Maps API.

Github Searcher

2020

Developed a Redis-cached API integration app to explore GitHub users and repositories.

Certifications

Grokking Modern System Design Interview for Engineers&Managers

2023
